

Kentucky's Affordable Prepaid Tuition

**ANNUAL ACTUARIAL VALUATION OF THE PREPAID
TUITION TRUST FUND FOR KENTUCKY'S AFFORDABLE
PREPAID TUITION**

JUNE 30, 2011

September 22, 2011

Mr. David Lawhorn
Director
Kentucky's Affordable Prepaid Tuition
100 Airport Road, P.O. Box 798
Frankfort, KY 40601

Dear Mr. Lawhorn:

We have completed our actuarial analysis of the Prepaid Tuition Trust Fund ("the Fund") for Kentucky's Affordable Prepaid Tuition ("KAPT" or "the Program") as of June 30, 2011. This report presents our findings with respect to the Fund's expected cash flows and adequacy of the Fund in light of assets in the Fund.

The analysis of the funding of the Program was prepared for the KAPT Board for the purpose of assessing the actuarial soundness of the Fund as required by statute. The analyses have been prepared in accordance with generally accepted actuarial principles and practices commonly applicable to similar types of arrangements.

Currently the expected value of liabilities is \$178,843,631 and the value of assets (including contract revenues) is \$127,880,038 for a difference of (\$50,963,593) or 28.5% of liabilities. These results are based on assumptions approved by KAPT personnel after consultation with us.

We appreciate the opportunity to serve the Commonwealth of Kentucky.

Very truly yours,

John T. Condo, FSA, MAAA, Ph.D.

I. EXECUTIVE SUMMARY

The following are the key findings of our analysis.

Status of the Program

The KAPT Fund's liabilities exceed its assets by \$50,963,593 resulting in a deficit. This result is based on the assumption that the Program will not sell any additional contracts.

The deficit is offset by the availability of the Kentucky Abandoned Property Fund as provided in KRS 393.015. Seventy-five percent of the Abandoned Property Fund is available for any unfunded liability of KAPT pertaining to contracts entered into before March 20, 2005.¹ As of June 30, 2011, the balance of the Abandoned Property Fund is \$332,773,368.

If the Program continues to sell appropriately priced contracts, then the deficit is projected to be cured in as few as 8 years, depending on the number of contracts sold. This issue is addressed more fully in the *Effects of Future Contract Sales* section of this report.

Furthermore we note that the results above are based on a single baseline estimate of future experience. Potential volatility and a historical-basis statistical measure of results are addressed more fully in the *Monte Carlo Modeling* section of this report.

The table following summarizes results for June 30, 2011:

Value as of June 30, 2011	Assets and Liabilities
Invested Assets & Contract Receivables	\$127,688,002
Other Receivables & Accruals	192,036
Actuarial Liabilities	178,764,466
Other Liabilities	<u>79,165</u>
Actuarial Deficit	<u>(\$50,963,593)</u>
Deficit as a Percent of Liabilities	28.5%

¹KRS 393.015 was repealed in March, 2005. A Franklin County Circuit Court ruling in 2006 affirmed that the repeal could not apply to KAPT contracts opened before the repeal.

Key Assumptions

Key economic assumptions are listed below.

Key Assumptions	
Yield on Investments	
All Years	6.56%
Investment returns are before expenses.	

Key Assumptions (Continued...)	
Tuition Inflation	
All Classes of Contracts	
2012/13	7.25%
All years thereafter	6.75%
Expenses	
Initial Expenses	\$487,060
This amount is allocated on a per contract basis and is projected to decrease over time as the number of contracts decreases.	

The tuition inflation assumptions are based on a combination of statistical models of tuition increases and on actuarial judgment. Our statistical models use information from the past 20 years.

II. RELIANCES & COMPLIANCE WITH ACTUARIAL STANDARDS OF PRACTICE

In making the projections on which this report is based, we relied on the following information supplied to me as indicated below.

- Tuition amounts at Kentucky colleges and universities, public and private, supplied by the staff of KAPT
- Program expenses, supplied by the staff of KAPT
- Market value of assets of the Program's trust fund, supplied by the staff of KAPT
- Inventory of KAPT contracts by category, enrollment period, payment method and anticipated matriculation year, supplied by the Program's records administrator, Intuition Solutions, Inc.
- Assumptions regarding future investment returns on the Program's trust fund, supplied by the Program's investment advisor, Callan Associates, Inc.
- Assumptions regarding the Program's anticipated asset allocation, supplied by the Program's investment advisor, Callan Associates, Inc.

There are no actuarial standards of practice that apply specifically to prepaid tuition programs. However, there are two general standards that we believe apply:

- Actuarial Standard of Practice #23 "Data Quality". This standard sets guidelines on review of data supplied by a third party. We have performed reasonableness and consistency checks on the data supplied to us by personnel of the Program and by the records administrator, and are in compliance with this standard. Our review of the data was not an audit of the data.
- Actuarial Standard of Practice #41 "Actuarial Communications". This standard sets general guidelines for actuarial communications. This report is in compliance with Standard #41.

III. DESCRIPTION OF THE PROGRAM

The Program was created in 2000 by the Kentucky Legislature "to provide access to participating institutions for the qualified beneficiaries and to provide students and their parents' economic protection against rising tuition costs." The Legislature created the Prepaid Tuition Trust Fund in the custody of the state treasurer for administration by a board of directors. "The fund shall consist of payments received from prepaid tuition contracts. Income earned from the investments of the fund shall remain in the fund and be credited to it."

Administration of the Program and board governance now resides with the Kentucky Higher Education Assistance Authority.

Description of Contracts & Payment Options

There are three types of contracts.

- The Value Plan, which provides in-state tuition at community colleges and technical colleges. Purchasers have the option of buying one year or two years of tuition under the Value Plan.
- The Standard Plan, which provides in-state tuition at any of Kentucky's eight public universities. The price for Standard Plan contracts is based on the most expensive public university. Purchasers have the option of buying from one year's tuition to five years' tuition in one-year increments.
- The Premium Plan, which is designed to cover the cost of average tuition at Kentucky's private colleges and universities. The cost of the Premium Plan contracts is based on the enrollment weighted-average tuition of Kentucky's private colleges and universities and increases at the same rate as tuition increases at the University of Kentucky. Similar to the Standard Plan, purchasers may purchase one year's tuition to five years' tuition in one-year increments.

Contracts are available to students who are at least two years away from initial college enrollment. Benefits can be used at any institution of higher education that is accredited by the U.S. Department of Education anywhere in the country. Benefits paid for out-of-state institutions or graduate schools will not exceed the benefits provided for Kentucky undergraduate benefits described above.

Each contract type has three main types of payment options:

- Lump Sum Payment
- Installment Payments, which come in several varieties:
 - Monthly payments over three years
 - Monthly payments over five years
 - Monthly payments over seven years
 - Monthly payments until the beneficiary's projected year of enrollment

- A combination of a Lump Sum down payment plus Installment Payments, where the installment payments are available in the following options:
 - Monthly payments over three years
 - Monthly payments over five years
 - Monthly payments over seven years

Residency Requirements

There are no residency requirements imposed on the purchasers of KAPT contracts. KAPT beneficiaries can be either:

- Kentucky residents at the time the application is signed or
- Intend to attend college in Kentucky.

Refunds

For cancellations other than death, disability, or receipt of a scholarship, the purchaser receives a refund of payments minus administrative charges and cancellation fees if the cancellation occurs before July 1 of the projected year of initial college enrollment. Cancellations for reasons other than death, disability, or receipt of a scholarship that occur on or after July 1 of the projected year of initial college enrollment will receive the tuition payout value of the contract minus administrative and cancellation fees.

If the beneficiary dies, becomes disabled, or receives a scholarship, the purchaser will receive the tuition payout value of the contract with no deduction of any administrative or cancellation fees.

Change of Beneficiary

A contract owner may request a change of beneficiary to a substitute who is a family member of the immediately-preceding beneficiary. Changes in beneficiary for reasons other than death, disability, or receipt of a scholarship of the original beneficiary will be subject to administrative fees.

IV. SUMMARY OF CONTRACT DATA AND CURRENT ASSETS

Contract Data

Data on the number of outstanding contracts and payments was provided by the Program's records administrator, Intuition Solutions, Inc. The graphs below summarize the data provided concerning these KAPT contracts.

Distribution of KAPT Contracts by Year of Initial College Enrollment

Current Assets

The assets currently held by the Fund are an important part of the determination of the actuarial adequacy of the Program. The investment strategy for those assets is also critical to the yield and to the vulnerability of the Program's actuarial adequacy to changes in the return earned on investments.

Fund Investments

The total market value of assets held plus accrued income as of June 30, 2011 is \$121,642,856. The allocation of these assets is shown in the table below.

Market value of cash & invested assets held as of June 30, 2011		
	<u>Amount</u>	<u>% Of Total</u>
Cash	\$2,124,790	1.75%
Corporate Bonds	17,463,414	14.36%
U.S. Treasury and Government Agency Securities	29,332,254	24.11%
Corporate Stock	72,606,866	59.69%
Money Market & LIBOR Securities	<u>115,532</u>	<u>0.09%</u>
TOTAL	\$121,642,856	<u>100.00%</u>

Investment Strategy

The investment strategy is designed to achieve an investment return in excess of tuition inflation, which will allow KAPT to provide the contractual benefits to KAPT beneficiaries at their anticipated initial year of college enrollment. As of June 30, 2011, the Fund's asset allocation has a target allocation by asset category as follows:

- Large Cap U.S. Stocks 45%
- Small/Mid Cap U.S. Stocks 8%
- Non-U.S. Stocks 5%
- Inflation Indexed Bonds 26%
- Corporate Bonds 14%
- Cash 2%

V. ACTUARIAL METHODS AND ASSUMPTIONS

Methods

The actuarial method for the determination of the adequacy of the Fund consists of projecting future tuition rates, future expenses based on the average anticipated number of KAPT Contracts in place, and future utilization of KAPT Contracts. Future benefits and expenses are discounted using the assumed investment yield as the interest discount rate. The assumed discount rate is based on the current and anticipated mix of assets of the Fund.

For the projection of future benefits, the analysis proceeds as follows:

- Project future tuition rates for all years under consideration. Future tuition is based on the assumptions for tuition inflation. These assumptions vary by postsecondary school.
- Determine the nominal cost of future use of KAPT contracts based on the assumptions regarding utilization of contracts and the length of time the average beneficiary will take to complete his college education.
- Determine the nominal value of administrative expenses.
- Determine the present value of future contract usage and future expenses based on the investment yield assumptions.
- Perform projections for all of the Program's beneficiaries to determine if the Fund is adequate in the aggregate and make sufficient provision for overhead expenses.

Assumptions

Actuarial assumptions used to determine financial soundness of programs are of two general types: economic and demographic. Demographic assumptions determine the expected exposure to financial claims and generally answer the question "How and when will people use their contract?" Economic assumptions are concerned with the expected level of contract usage and answer the question "What is the expected value of contract usage?" The assumptions that we used were those that were approved by the KAPT Director, after consultation with us.

Economic Assumptions

Economic assumptions are used to estimate the annual tuition rates at two and four year colleges, increases in Fund expenses, and Fund earnings on assets invested. Because inflation is a major component of the rate of increase in tuition rates and of investment returns, we considered these rates together. We believe that the difference in these rates is more important than the absolute level of the rates. The following paragraphs describe the economic assumptions used in this study.

Federal Income Tax

We assumed that Fund earnings are exempt from Federal Income Tax.

Annual Tuition Rates

Tuition increases vary by duration and are shown in the table below. Our assumptions were guided by our observations of historic tuition increases, trends in postsecondary enrollment in Kentucky, and the level of legislative appropriations for postsecondary schools in Kentucky.

Tuition Inflation	
All Classes of Contracts	
2012/13	7.25%
All years thereafter	6.75%

Fund Earnings Rate

Our assumption for investment returns is based on information supplied to us by the Program's investment advisor, Evaluation Associates. Evaluation Associates supplied us with expected asset class returns. The assumption below is gross before expenses and is based on the asset class returns combined with the Program's target allocation ratios.

Investment Returns	
Investment Return for all future years	6.56%

Annual Expenses

We are projecting future expenses to be as shown in the following table.

Expenses	
Investment Expenses	
Applicable to all assets	0.20%
Administrative Expenses	
Initial Annual Amount	\$487,060
This amount is allocated on a per-contract basis	

Demographic Assumptions

The demographic assumptions used in this report are based on our experience with similar types of liabilities. Our choice of assumptions is based on recent experience and our best estimates as to future events. These assumptions are as follows:

Contract Cancellations Due To Mortality and Disability

We assumed no contract terminations due to death or disability.

Other Contract Cancellations

We assumed that contracts would cancel according to the tables given below.

Contract Cancellation Table 1 of 2			
Type of Payment=>	Lump Sum	36 Monthly Payments	60 Monthly Payments
Year of purchase	1.50%	3.00%	5.00%
Year of purchase+1	1.00%	2.00%	4.00%
Year of purchase+2	0.75%	1.00%	3.00%
Year of purchase+3	0.75%	1.00%	2.00%
Year of purchase+4	0.50%	0.75%	1.00%
Thereafter	0.50%	0.75%	0.75%

Contract Cancellation Table 2 of 2			
Type of Payment=>	84 Monthly Payments	Extended Payments	Custom Payments
Year of purchase	6.00%	8.00%	8.00%
Year of purchase+1	4.00%	7.00%	7.00%
Year of purchase+2	3.00%	5.00%	5.00%
Year of purchase+3	2.00%	4.00%	4.00%
Year of purchase+4	1.00%	3.00%	3.00%
Year of purchase+5	1.00%	2.00%	2.00%
Year of purchase+6	1.00%	1.00%	1.00%
Thereafter	0.75%	0.75%	0.75%

Matriculation Percent

All beneficiaries are assumed to matriculate at the matriculation date specified in the application, except for those who are projected to terminate, die, or become disabled.

Utilization of Benefits

We assume that beneficiaries will enroll in college at the date indicated as their anticipated matriculation date. We also assume that beneficiaries will use one year's worth of benefits over the course of only one academic year. That is, a 4-year contract will use all benefits over four academic years.

Within an academic year, contract usage is assumed to be 50% for the fall semester, 50% for the spring semester and none for the summer semester.

We believe these assumptions are slightly conservative since the alternate assumption is to assume that beneficiaries use their benefits more slowly. This slowdown in utilization would be beneficial to the Program since the anticipated Fund earnings rate will exceed the tuition increase rate after the first five years of the projection.

Dropout Rate

All beneficiaries are assumed to use 100% of their contractual benefits once they have enrolled in college.

Frequency of Beneficiary Replacement

Since all surviving beneficiaries are expected to matriculate and are expected to use their KAPT contracts until completion, the assumption is made that no replacement of beneficiaries will occur.

VI. STATUS OF THE FUND AS OF JUNE 30, 2011

In determining the status of the Fund, we estimated the future disbursements for higher education expenses of beneficiaries, expenses, and refunds for terminated contracts. We also projected the future assets based on current assets and expected earnings on assets. We believe these estimates are reasonable based on the information available and our past experience and judgment.

The estimates of the prospective assets and liabilities of the Fund are summarized in the table on the following page and demonstrate the financial position of the Fund. The value of all assets is \$127,880,038 while the expected value of liabilities is \$178,843,631. The resulting actuarial deficit is \$50,963,593.

The actuarial deficit will change from year to year due to positive and negative cash flows and due to the change in the present value of future contract usage and expense payments because of the passage of time. The actuarial deficit will also change due to the variance of experience from the assumptions. These variances include tuition increases, investment income, and expenses.

The deficit will also change due to the growth of the program and due to the updating of the assumptions to reflect the Program's emerging experience. The changes for the year ending June 30, 2011 are summarized in the table below.

Progression of Deficit	
Deficit at June 30, 2010	(\$ 62,192,465)
Projected Increase to June 30, 2011 ²	(4,332,376)
Gain due to Favorable Tuition Inflation	3,302,932
Gain due to Favorable Investment Experience	15,039,038
Gain due to Additional Contract Sales	- 0 -
Changes due to Change In Assumptions	(3,112,893)
All Other Changes ³	322,171
Deficit at June 30, 2011	(\$ 50,963,593)

² The projected increase represents interest on the beginning deficit amount, plus some additional amounts due to the change in the non-level tuition inflation assumptions.

³ All Other is comprised mainly of differences between projected and actual expenses and of differences between projected and actual contract usage and cancellations.

In the following chart we show the value of expected future contract usage, expected future payments, current assets, and expected deficit as of the end of each future year for active contracts as of June 30, 2011. We note that the Fund is projected to have sufficient money to pay benefits until Fiscal 2019 - that is, for a period of eight years.

PRESENT VALUE OF ASSETS AND LIABILITIES

Fiscal Year Ending	Assets Other Than Future Revenues	Actuarial Value Of Future Revenues	Value of Liabilities	Actuarial Deficit
2011	121,834,893	6,045,145	178,843,631	(50,963,593)
2012	104,003,458	4,714,709	163,024,971	(54,306,805)
2013	88,412,627	3,743,598	150,025,556	(57,869,331)
2014	73,537,355	2,906,746	138,109,660	(61,665,559)
2015	57,957,206	2,189,803	125,857,829	(65,710,820)
2016	43,125,395	1,572,645	114,719,490	(70,021,449)
2017	27,239,150	1,051,296	102,905,302	(74,614,857)
2018	9,946,372	637,350	90,093,313	(79,509,591)
2019	(9,233,766)	354,427	75,846,081	(84,725,420)
2020	(29,893,964)	153,095	60,542,539	(90,283,408)
2021	(51,423,494)	44,112	44,826,617	(96,205,999)
2022	(72,938,557)	6,766	29,585,322	(102,517,113)
2023	(91,874,672)	- 0 -	17,367,564	(109,242,236)
2024	(107,836,023)	- 0 -	8,572,503	(116,408,526)
2025	(120,825,759)	- 0 -	3,219,167	(124,044,926)
2026	(131,385,409)	- 0 -	796,864	(132,182,273)
2027	(140,804,552)	- 0 -	48,878	(140,853,430)
2028	(150,093,415)	- 0 -	- 0 -	(150,093,415)

VII. EFFECT OF FUTURE CONTRACT SALES

We have considered the effect of future contract sales on the existing Fund deficit. Our analysis assumes that contract sales resume for the 2011/12 enrollment period with contract payments beginning in February 2012. We examined three different levels of contract sales: 1,000 contracts each year; 2,000 contracts each year and 3,000 contracts each year. For each of these sales levels, we examined three different premium surcharge levels – 5.0%, 7.5% and 10.0%.

For each of these 9 scenarios, we projected future contract prices for each future projected enrollment period. We projected financial results for each future enrollment period according to the projected number of contracts and the amount of premium surcharge.

The number of future consecutive enrollment periods required to generate sufficient surplus to cure the existing deficit is shown in the table below.

Enrollment Periods Required to Cure Deficit			
Contracts Sold	5% Premium	7.5% Premium	10% Premium
1,000	20+ ⁴	20+	17
2,000	9	7	6
3,000	6	5	4

We have also determined the amount of premium needed at each level of sales to cure the deficit in 10 enrollment periods.

Premiums Required to Cure Deficit Over 10 Enrollments		
1,000 Contracts	2,000 Contracts	3,000 Contracts
16%	6%	4%

⁴ Number of enrollment periods indicated as 20+ do not generate sufficient projected margins to offset the current deficit as projected into the future. We did not project enrollment periods more than 20 years out since this is beyond the time when all existing contracts will have expired or matured.

VIII. SENSITIVITY TESTING

We believe that when there is a significant amount of uncertainty about conditions prevailing in the future it is important to test for adequacy under other possible assumptions.

We investigated the effect of variances in both university inflation and investment yield assumptions from those anticipated by the adequacy test assumptions. For these projections, we assumed no future contributions. These scenarios are described below. These scenarios are based on level adjustments to the baseline adequacy assumptions discussed earlier in this report.

- 1) Tuition inflation lower than adequacy test assumptions by 0.25% every year.
- 2) Tuition inflation higher than adequacy test assumptions by 0.25% every year.
- 3) Investment yields higher than adequacy test assumptions by 0.25% every year.
- 4) Investment yields lower than adequacy test assumptions by 0.25% every year.
- 5) Tuition inflation higher and investment yields lower than adequacy test assumptions by 0.25% every year.

The deficit for each of these scenarios is shown below.

Sensitivity Testing Results		
<u>Scenario</u>	<u>Deficit</u>	<u>Change From Reported</u>
1	(\$49,047,933)	\$1,915,660
2	(\$52,909,543)	(\$1,945,941)
3	(\$48,954,650)	\$2,008,943
4	(\$53,014,598)	(\$2,051,005)
5	(\$54,997,344)	(\$4,033,751)

IX. MONTE CARLO ANALYSIS

We have retained the same model for stochastic projections as we used last year. We have updated the beginning values to reflect 2011 actual results, but otherwise have left the same structure and parameters in place.

As in prior years, we ran 10,000 scenarios with varying tuition inflation and investment returns. The results are summarized in the table below.

Proportion with positive Actuarial Reserve	3.9%
25% of results are better than:	(\$38,716,760)
50% of results are better than:	(\$59,808,698)
75% of results are better than:	(\$84,015,640)
Largest Actuarial Reserve	\$218,231,816
Smallest Actuarial Reserve	(\$244,997,159)
Mean Actuarial Reserve	(\$61,823,110)

The most important measures from the table immediately above are the Proportion with positive Actuarial Reserve and the 50% Results. The Proportion with positive Actuarial Reserve probability of 3.9% indicates that there is almost a 4 in 100 likelihood that the Program will have a surplus.

The 50% Results measure is a “best-estimate” measure of results. If our assumptions are neither conservative (that is they understate results) nor aggressive (that is they overstate results) then the 50% Results measure should be close to our projected result of (\$50,963,593). The table above indicates that our assumptions are somewhat

aggressive – mainly due to the historical tuition inflation averages being higher than our current assumption.

Historic tuition is expected to be higher than our current assumption regarding tuition inflation because we are projecting a lower-growth scenario for both investment returns and inflation. The Program's Investment Advisor has told us that their long-term average expectation for CPI is now 2.75%. Our tuition inflation assumption is consistent with this CPI. Historical CPI (and corresponding historical tuition increases) are higher, on average, than 2.75%.

The Smallest Actuarial Reserve indicates what happens if economic events continue adversely for the lifetime of the current contracts –high tuition increases, coupled with negative returns in the equity market until the end of the projection horizon. On the other hand, the Largest Actuarial Reserve indicates what happens if economic conditions are favorable for the remaining lifetime of the current contracts.

X. CHANGES IN ACTUARIAL ASSUMPTIONS

We made two changes to the assumptions used in projecting the actuarial deficit. These assumption changes in aggregate increase the deficit. The changes are discussed below.

Changes in Expenses

We updated the assumption for aggregate expenses to reflect the current budget of the program as shown below. These expenses are projected on a per-contract basis and assumed to decline with the natural decrease in existing contracts.

Current Assumption	Prior Assumption
\$487,060	\$487,835

Change in Investment Return

We updated the investment return to reflect the Investment Advisor's most current view of capital market returns as shown below.

Current Assumption	Prior Assumption
6.56%	6.95%

Dollar Effect of Change in Assumptions

If assumptions had been the same as last year, the Program's deficit would have been:

(\$47,850,700)

These two changes increased the deficit by \$3,112,893. The individual effect of each of the changes is:

- Investment return change: \$3,115,980 increase in deficit
- Expense change \$ 3,087 decrease in deficit

XI. EXPECTED USE OF FUNDS

The Fund, which is comprised of contributions, fees, all interest and earnings, and any other money appropriated or made available to KAPT, is expected to pay benefits and expenses in the following proportions:

- Tuition payments - 97.2%
- Expenses - 1.6%
- Payments of refunds to contract owners - 1.2%

These results are shown graphically below.
